

**PUBLIC NOTICE**  
**COMMISSIONERS OF ST. MICHAELS**

During 2010, our water system was required to conduct a system evaluation to characterize disinfection by-products (DBP's) in our distribution system and to identify the best places to monitor starting in the fourth quarter of 2012, as required by the Stage 2 Disinfection By-Product rule. Our sampling plan was submitted late to the United States Environmental Protection Agency (U.S. EPA). Although this incident did not affect the quality of your water, as our customers, you have the right to know what happened and what we did to correct this situation.

There is nothing that you need to do. The quality of your water was not compromised at any time. All disinfection by-product samples were collected according to all regulatory requirements and were properly reported within all established deadlines.

The sampling plan for our water system was found acceptable by U.S. EPA and was approved. The issue has now been resolved.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses). This notice will be posted in the Library, Post Office and Town Office of St. Michaels. For more information, please contact the Public Works Department at the Town of St. Michaels, 300 Mill Street, PO Box 206, St. Michaels, MD 21663 - 410-745-9535.
